

AMENDMENTS TO THE SPECIFICATION

Please replace paragraph [0058] with the following rewritten paragraph:

--[0058] The liquid flowing out of the eyedrops container A after breaking the sealed condition is guided to the outside through the grooves 9a formed in the side face of the push-in member 9. At this time, since the second tight contact member 13 provided on the inner peripheries of the base member 97 contacts the push-in member 9 tight, the medical liquid can be prevented from flowing out through passages other than the grooves 9a. Thus, it is possible to restrain the liquid from leaking from the container body 10 in use.--
